

LEMENAND Maxime

DevOps / SRE | Automation, Self-Hosting, AI-Driven Operations

Profil

<https://linkedin.com/in/maximelemenand>

Portfolio

<https://maxime-lemenand.com/>

Email

contact@maxime-lemenand.com

SKILLS

LINUX/UNIX

Advanced

Administration and troubleshooting of Linux/Unix production environments, including system configuration, services, performance, security, and incident resolution.

CLOUD INFRASTRUCTURE

Advanced

Deployment and administration of cloud infrastructure, including compute, networking, storage, identity, security, and hybrid environments.

IaC & AUTOMATION

Advanced

Infrastructure automation and deployment using Terraform, Ansible, scripting, and GitOps practices to build reliable, scalable, and reproducible environments.

VIRTUALIZATION & NETWORKING

Advanced

Deployment and administration of virtualized and network environments, including VMware, Proxmox, Nutanix, routing, firewalls, VPNs, and load balancing.

EXPERIENCE

2021
Current

Eidos Montréal (Montreal, Canada)

DevOps

- Build and operate platform and infrastructure services supporting production and internal environments
- Deliver and operate containerized workloads on Kubernetes, from cluster operations to application delivery
- Automate infrastructure and operational tasks through Terraform, Ansible, Salt, GitLab CI and GitOps workflows (FluxCD) to improve consistency, speed and maintainability
- Design and operate on-premise AI/LLM infrastructure GPU-based model serving, inference gateways and internal AI platforms supporting company-wide usage
- Maintain monitoring, logging and alerting across Linux and Windows environments (Prometheus, Grafana, ELK, Alertmanager)
- Troubleshoot complex issues across systems, cloud, containers, networking and platform services

Infrastructure as Code

- Ansible / Salt
- Terraform
- GitLab
- Kubernetes / Docker / Container
- FluxCD
- Packer

Logs

- Prometheus
- Grafana
- ELK stack
- Alertmanager
- Telegraf

System

- Vcenter/ESXi 6.5 / 7.0
- NSX-T
- Linux (Ubuntu/CentOS)
- HP ILO
- Nutanix

AI / LLM Infrastructure

- GPUStack / LiteLLM
- Ollama / llama.cpp
- Open WebUI
- Model serving & GPU optimization

Network

- Firewall Palo Alto
- Netbox / Ipam

Cloud

- Azure
- GCP
- AWS

Tools

- Jira / Confluence
- SnipeIT

Security

- Greenbone / OpenVAS (GVM)
- Vault HashiCorp
- Sops

2017
4 year
and a half

OVH (Montreal, Canada)

Administrator System / DevOps

Perimeter : Private Cloud

- Maintain in operational condition the worldwide infrastructures.
- Troubleshooting / resolution of different incidents.
- Application of requests / change customers.
- Improvement of different service stability.
- International correspondence between the different customers / services.

VMware 5.5, 6.0, 6.5

- Vcenter (~4k)
- ESXi (~12k)
- NSX
- vRops
- Log Insight
- vSAN

Backup/DR

- Veeam backup
- Zerto

OS

- Linux
- Windows

Network

- Cisco 1000v
- First troubleshoot Switch Cisco/Arista

Tools

- Jira / Confluence
- ServiceNow

2016
1 year

Transdev (Lyon, France)

Integration Engineer

- Responsible for the installation and for the configuration of solutions to implemented.
- Bring technical and/or functional recommendations.
- Definition of architecture, choice of solutions.
- Delivery of documents for installations.
- Support and maintenance of solutions in production.

Operating System

- VMware 6.0
- Windows Server 2008/2012
- Linux Debian 8

Applications

- IIS Server 7/8
- Microsoft SQL Server 2008/2014
- XenApp 6.5

2014
1 year
and a half

Orange (Grenoble, France)

System and Network Administrator

Environment of ~400 servers (95% Linux/Unix, 5% Windows), ~100 networks equipments

System Support

- Cluster ESXi: Remastering, configuration, upgrade, integration of machines, administration
- Servers Linux/Unix/Windows: Deployment, configuration, troubleshooting, administration
- Scripts: Automatization of tasks, deployment of actions on a set of servers
- Nas: NetApp
- BladeSystem: Configuration, administration
- Resolution of incidents systems

Network Support

- Load Balancer (Alteon): Configuration real/group/VIP/filter, troubleshooting, debug
- Firewall (Juniper, Nokia): Implementation, configuration, opening of flows, debug
- Router/Switch (Juniper, HP, Extreme Networks, Nortel)
- Perle/Portmaster: Implementation, configuration, administration
- BladeSystem: Configuration, administration
- Resolution of incidents networks (analysis/debug)

Supervision

- Centreon: Implementation of monitoring for systems/networks

Steering DataCenter : Instruction of implementation in production, documentation, replacement of pieces/materials defective

Miscellaneous

- Organization and instructions during transports of materials
- Quote management

2014
1 year

KEOLIS (Caen, France)

System and Network administrator in contract of professionalization

System

- Administration of the park of Windows Server 2003/2008/Hyper-V
- Administration Citrix: XenApp, debug
- Manage/debug of backups: ArcServ
- Administration and deployment of antivirus system McAfee: ePO
- Supervision: CACTI and OCS/GLPI

Support

- Users assistance: XP/7, Office 2003 at 2010, messaging, business applications

Deployment

- Migration from Windows XP to 7

Study of the current state of the information system

- Diagnostic of the information system: Technical, Organization, People
- Audit of the matrix of brewing

ACHIEVEMENT

2026

LLM Operations Platform

Designed and deployed an on-premise LLM platform to interact with internal infrastructure tools and operational data. Integrated Snipe-IT and infrastructure log sources to enable natural-language asset lookup, troubleshooting and incident investigation.

Implemented use cases including firewall analysis, Kubernetes diagnostics, network troubleshooting, system log analysis and access auditing.

Built the platform using GPUStack, LiteLLM, Ollama, llama.cpp and Open WebUI, with local GPU inference and model routing.

Result : Reduced investigation time by centralizing infrastructure data access and enabling cross-system analysis through a conversational interface.

2025

Infrastructure Vulnerability Scanning

Deployed Greenbone/OpenVAS (GVM) with Ansible-automated agent rollout and configuration, including automatic onboarding of new machines.

Distributed scan load across recurring time windows to avoid overlapping long-running scans.

Result : Continuous vulnerability visibility across the fleet with zero manual setup.

2023

SMTP Relay Server

Implementation of an SMTP relay server utilizing O365 involves configuring several components, including Postfix, SpamAssassin, Fail2Ban, Awstats, Nginx, Fcgiwrap, Firewall-cmd and OAuth2.

Result : Fully automated deployment capable of being redeployed from scratch, complete with configuration. Emails are now secured with TLS, complemented by a dashboard for comprehensive statistics tracking

2016

Clustering

Implementation of an architecture of 11 servers, including a Microsoft cluster SQL and a cluster of services on disk RDM.

Writing documentations for implementation in production.

Follow-up of the project and support at implementation in production.

Space reclaim – VMware/SAN

Creating a script to recover deleted space from provisionned disks on LUNs hosted on 4 bay EMC VNX 5100/5400.

Result : 10 To storage space recovered on 150 To

2017

Logs Analyzer

Implementation of tools Rsyslog, Elasticsearch, Logstash and Kibana for centralize, correlate and exploit millions of logs coming from networks and systems equipments.

Result : Correction of the repetitive incidents, platform optimized

2014

2016

Backup script networks equipments

Creating a script in shell allowing to backup the configurations of all networks equipments (Switch, Router, Load Balancer, Firewall).

Automatic backup with report by email.

Result : 60% decrease the time of resolution of the incidents

CERTIFICATIONS

Microsoft

Office 365 Exchange Online: Administration and Configuration

Issued January 2023 – No expiration date

ITIL

ITIL v4 Foundation Level

Issued November 2019 – No expiration date

VMware

VMware Certified Professional – Data Center Virtualization 2019

Issued July 2019 – No expiration date

Microsoft

Microsoft Azure Administrator AZ-104

Issued December 2022 – No expiration date

Zerto

Zerto Certified Professional for Cloud Service Providers

Issued October 2019 – No expiration date

EDUCATIONS

2014

Professional License ASRSI

IUT of Caen (France)

Audit and Security of Networks and Systems and Information System

Diagnostic of risks and politics of networks secure and information system

- Identification, measured and diagnostic of risks
- Implementation of politics of security

Level of education : Certificat

Prize: Mention fairly well

Security of computer systems

- Security of networks
 - SIEM, IPS/IDS, ACL, Encryption of flows/data
 - Zoning, Segregation of flows
 - ARP spoofing, DNS poisoning, DDOS
- Security of information system
 - DRP/BCP, SLA, Qos, Access management

2011

BTS SIO speciality SISR

2013

Lycée Technologique Sainte-Ursule of Caen (France)

IT services Organization speciality Infrastructure Solutions Systems and Networks.

Level of education : Academic 1st cycle

Prize : Mention fairly well

PERSONAL

- Dedicated server ESXi/Proxmox
 - Reverse proxy, Streaming remote server, DNS, Containers, Reverse VPN...
- NAS Synology x2 (Home/Cloud)
- Technological surveillance
- Home Automation with Home Assistant (ZigBee, WiFi, IR, radio frequency)
- Proficient in Kali Security Tools

ABOUT ME

Language

French (native language)

English (intermediate level)

Hobbies

New technologies, gym, home automation
